

A pair of elderly hands with wrinkled skin and short, slightly yellowed fingernails are gently cupping a small, intricately detailed wooden house model. The house is made of light-colored wood with dark brown trim around the windows, doors, and roofline. It has a gabled roof with a small dormer window. The background is a soft, out-of-focus white, suggesting a clean, clinical or professional setting.

Epilepsy Seizure Movement Detection Alarm Systems

FM84603

- Medpage seizure movement monitors use an under-mattress sensor to detect seizure movement
- Seizure movement notification alarm transmitted to caregiver pager, alarm receiver or via nurse call connection
- Manufactured in the UK by Medpage Limited under BSI audited quality management system
- Advanced proven seizure movement monitoring algorithms

MemRabel Task Scheduling Daily Calendar Planner Media Player

- MemRabel uses media files to create task/prompt schedules to aid people suffering from dementia, stroke, impaired cognitive skills
- Over 150 pre-installed prompt videos
- Create and transfer personalised file prompts from a Smartphone, Tablet or PC
- Local Authority platform available to control multiple devices

- Solutions available for web platform connectivity
- Control accounts for multiple device management, including alarm creation and message broadcasting

Fall Prevention & Detection Systems

FM84603

- **Medpage systems are designed for simplicity for the service user and the caregiver**
- **Systems available for one-to-one care or multiple patient monitoring**
- **Medpage products are manufactured and distributed through a controlled QMS**
- **High quality materials and thoughtful design ensure reliability, durability and cost effective solutions**
- **Medpage falls management products have been used in Hospitals and Care Homes for over 25 year's**

TumbleCare Fall Prevention Products for Home Care, Care Home and Hospitals

- TumbleCare is a new brand of products launched by Medpage Limited focussing on falls management
- Medpage has supplied fall prevention/detection systems for professional healthcare for over 25 years
- Systems are available for single user to multiple patient/ward monitoring
- Reliability, quality, durability and affordability

Specialist Fall Prevention Products for Home Care, Care Home and Hospitals (MPCSA11 Control Hub)

- Medpage MPCSA11 designed to offer flexible patient potential falls prediction
- Multiple monitoring mode selection
- Features to aid the carer and save time with patient care
- Smart alarm output control allows patient to move from bed to chair without alerting care staff
- Alarm notification to pager, nurse call system or IoT solution

Sensor Controllers – Alarm Transmission

Recordable voice prompt alarm

NMDTX2

Single/multiple user
ID Programmable
400M Signal range
Bed/chair/floor

Medpage Carer Event Notification Options

FM84603

Medpage understand the importance of providing reliable event notifications to carers using simplistic and reliable methods. Notification devices include wireless desktop nurse call, radio pager, tablet based nurse call station or direct connection to existing nurse call system.

Typical events include:

- Bed or chair exit
- Door egress – wandering
- Personal help call
- Sensor active alarm – Epilepsy, enuresis

Wander Detection Solutions Movement & Door Sensors

- Patient's wandering can lead to a multitude of hazards
- Personal injury
- Injury or inconvenience to others
- Increased care demands
- Additional strain on resources and man power
- Common methods to prevent wandering include the use of movement (PIR) sensors and door or window alarms.
- More sophisticated door egress alarms use patient wristbands or pendants to detect a person attempting to leave by a monitored door.

Medpage manufacture and distribute a comprehensive range of wander detection products for single or multiple device alarms

Established 1984

- Medpage design, manufacture and supply a diverse range of long transmission range care sensors
- Short messages are programmed to provide caller ID for display on a data message pager
- Long transmitter range of up to 400M (open field)
- Integrate with IoT solution Smartphone internet hub
- Unlimited user capability
