10 New Products in Year 10

This year we will be celebrating our 10th birthday.

To celebrate, we are launching 10 new products.

The first of which is the Notifier.

A pager designed for the digital future.

New. Not just improved.

Wireless Charging

With no charging contacts to keep clean, simply drop the Notifier into the base and it'll charge first time, every time.

Cloning

Over the air copying of all devices and settings from one Notifier to another can be completed in seconds.

Divert

Alerts can be sent to Dispersed Alarms or another Notifier if they aren't acknowledged within an adjustable time.

The Away Features allows the Notifier to be diverted with no delay.

SOS Button

For carers, lone workers and colleagues needing support. An SOS button can be added to the home screen to alert other Notifiers, or a Dispersed Alarm.

Auto Clear

When multiple handsets are being used, clearing down an alert on one Notifier will cancel it on the others.

Mute

Ideal for multiple handset situations. Notifiers can be set to Mute if a particular carer doesn't want to be disturbed.

More Features!

- All the features of the Buzzz + **much more**
- Updated user interface
- Easier to assign existing names/locations
- Easier to edit/delete devices
- Two new tone options - now 6 in total!
- Auto recognition of devices
- Option to remove alarm clock.

Thank You
