- Digital Transformation in Technology Enable Care Services in Nordics

WHY MOBILE?

PSTN Switch off

Devices fit for purpose

Issues with Broadband

Coverage

Easier Installation

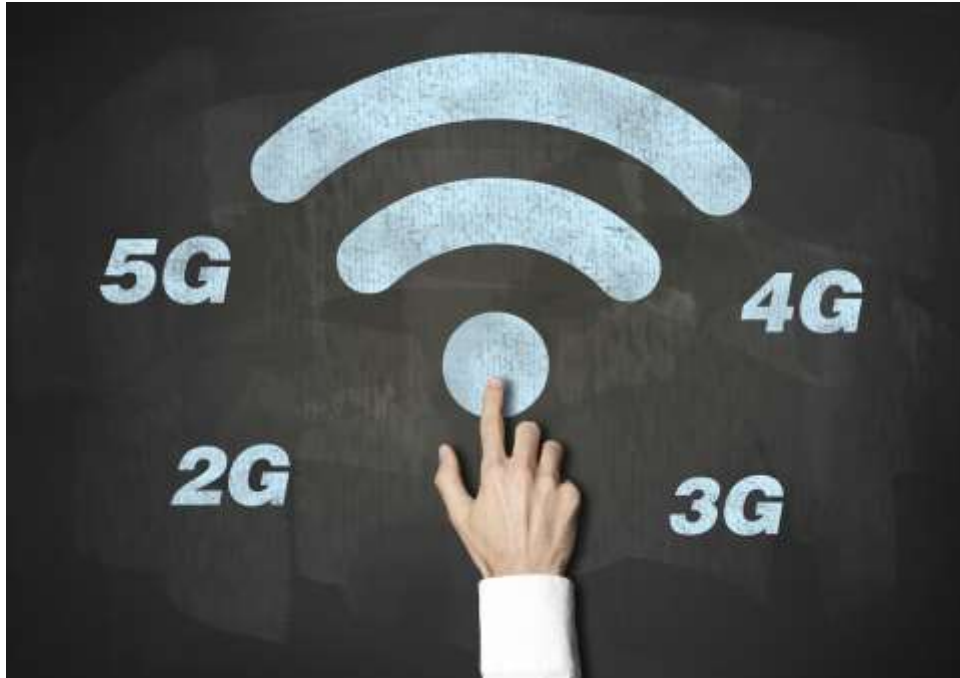

Ownership of problems

Learnings from abroad

Roaming SIMs
Heartbeat

2G / 3G SUNSETS & WHAT'S NEXT?

- 2G Still a Medium-Term Technology – Could be in use beyond 2030. UK Government & mobile network operators have agreed to phase out by 2033
- Smart Meters, Smart Motorways and eCall all use 2G
- 3G Short-Term Technology - Limited lifespan – To be phased out over next few years
- 4G Long-Term Technology – Large Investments being made
 - Shared rural network project for 4G coverage
 - New laws to connect countryside to 4G quicker and accelerate 5G roll out
 - Deployment of Self-powering masts
- Full UK 5G coverage and roaming still some years away
- As with all technologies before it, CSL will be working to provide 5G, VoLTE and other new technologies when available.

THANK YOU!
