archangel

a better way

Archangel® is a collaborative platform enabling service provider partners with a better way to support service recipients and to design and deliver the next generation of ambient monitoring services.

- Fully cloud based digital ARC platform with distributed alerting - completely serverless
- Background in lone worker and security
- Open agnostic partner to data integration and interoperability
- Research driven approach to prevention and early intervention models

archangel

a better way for CARE

Four fundamental delivery pillars:

- **Connect** - any device, any platform, and any network
- **Assess** - use data holistically to deliver preventive and predictive models of care
- **Respond** - create rules, triage alarms, and distribute to the right people at the right time
- **Evolve** - build on a solid foundation platform to manage your a2d needs today and evolve your services.

Certified Partner Programme

Become a partner and benefit from Archangel's ability to gather, collate and interpret data from multiple sensors and IoT devices, and assess and respond to this data using a singular platform.

connect

future-proof your service

Unique interoperable gateway connects and integrates multi-vendor systems

- supports legacy A2D transition
- full range of security and social alarm protocols
- innovate and scale IoT solutions including consumable available such as Amazon suite
- monitors individual and environment
- connects TEC, external partners and internal business systems in one platform

Archangel® Interoperability Gateway

Integrate your own
technology via APIs

Analogue & Digital
Social Alarms

Mobile
Technology

IoT Technology

Satellite
Communications

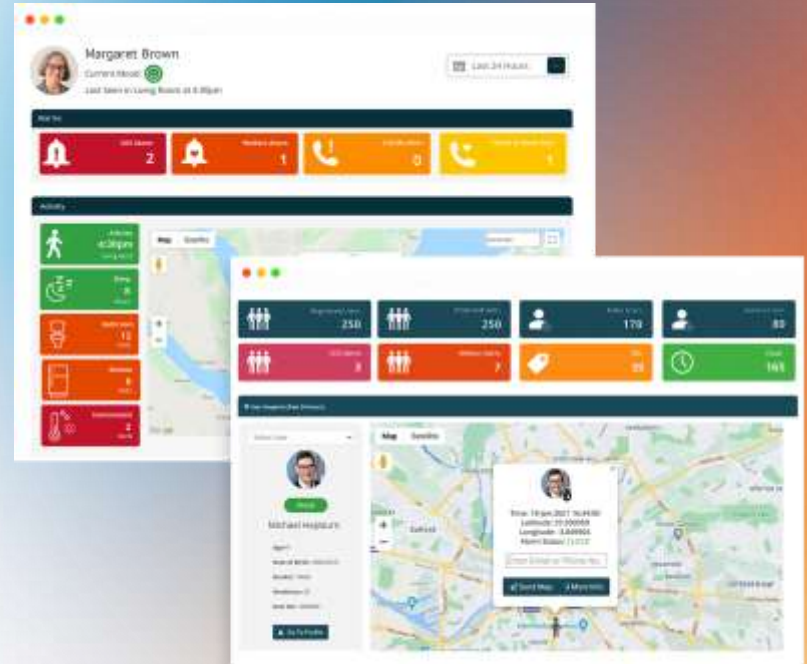

assess

a better way

Supporting organisations and care professionals to utilise and share data gathered from devices mitigating emergency response:

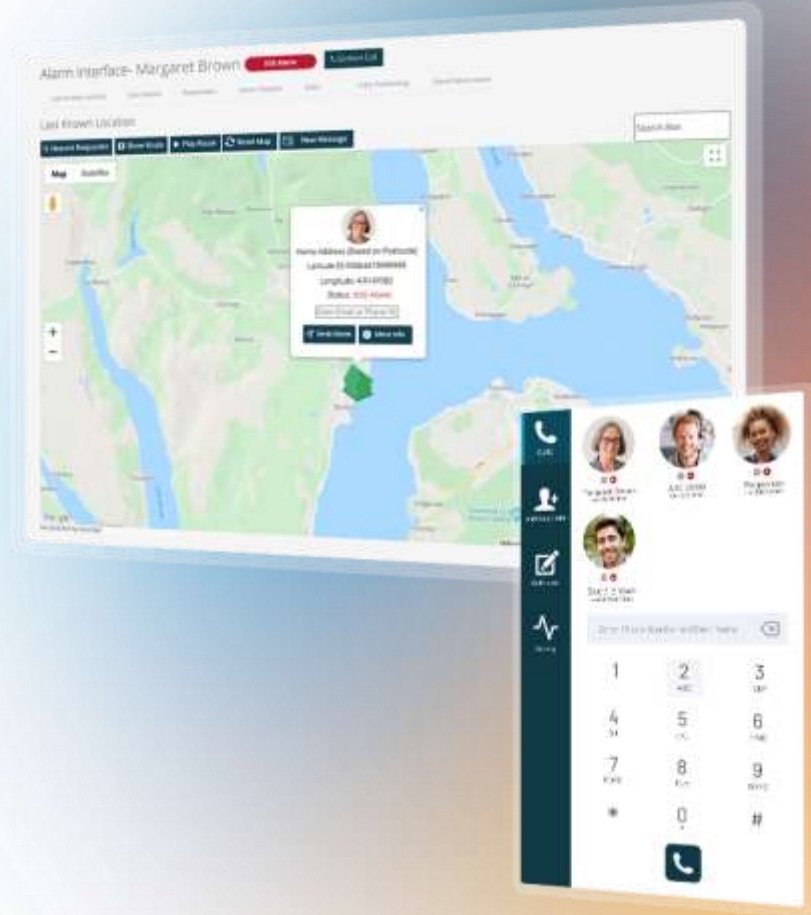

- data aggregation and population stratification
- predictive and preventative care modelling
- tailored dashboards, reports and infographics
- powerful data analytics coupled with rules, machine learning, and AI modelling enables holistic assessment of individuals and assets
- Ability to build and output reports in variety of formats and/or view via external

respond a better way

Data Data Data!
Requires flexible incident management

- Distributed Alerting
- Responder App.
- Skills Based Routing / Alerting
- Dynamic ARC routing
- Multi-channel communications

respond

distributed alerting

Building capacity into existing resources. Alerts can be raised based on rules and triggers to relevant stakeholders accordingly before finally arriving, if required, at the ARC.

- flexible business rules
- personalised alert plans supporting responder accessibility and equality
 - cascade responder alerting
 - broadcast alerting
 - flexible message formats e.g. SMS, email, Responder App, Audio Visual
 - multimedia formats
 - multi-device capability

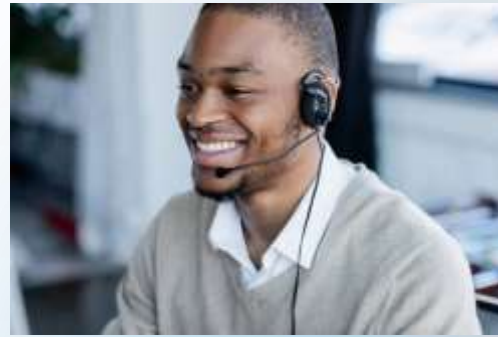

respond

skills-based alert routing

Configure alerts and alarms to most suitable individuals. Full upstream capability of broadcasting alerts and alarms prior to raising to an ARC

- direct alert escalations and / or alarms to appropriate individuals based on skill sets required
- manage alerts and alarms proactively
- deliver alarms based on previous interactions with individuals / operators
- deliver alarms based on workload management
- build a knowledge base content to support operators and ongoing CPD

respond

responder app

Initiate remote responders as part of the pre-alarm process

- broadcast to responders “on the clock”
- match responder skill and availability
- prioritise available responders within range
- manage responder acceptance and feedback
- manage lone worker safety (BS8484 Compliant)
- enable key information to be shared

evolve

visualise a better way!
